# Monoliths to microservices: App Transformation

Hands-on Technical Workshop

# Moving existing apps to the cloud

# The spectrum of enterprise apps

# Migration and modernization approaches

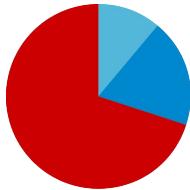

## MODERNIZING EXISTING APPS

- Reuse existing functionality and data as much as possible
- Move existing workloads to a modern deployment platform
- Apply new processes, products, and technology to existing apps

## DEVELOPING NEW APPLICATIONS

- API-centric polyglot microservices architecture
- Autonomous development teams
- Agile development, continuous deployment, DevOps culture
- Containerized & orchestrated cloud deployments

# Application modernization

# Patterns in modernizing workloads

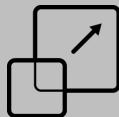

## LIFT & SHIFT

- Containerize existing workloads
- Deploy them on a **PaaS**
- Keep external integrations and data on legacy
- Legacy applications have to be well written and suited

## CONNECT & EXTEND

- Legacy remains intact
- New layer - new capabilities
- Deploy on **PaaS**
- New integration points between legacy and new layers (**Need for Agile Integration**)

## RIP & RE-WRITE

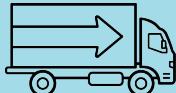

- Legacy is totally replaced
- New interfaces and data
- Use **PaaS** to run
- Some data and features can be re-wrapped, but mostly are retired.

# Lift-and-shift monolith to cloud

# Lift-and-shift monolith to cloud

# Majestic Monolith

<https://m.signalvnoise.com/the-majestic-monolith-29166d022228>

## Majestic (fast-moving) monolith

- Large organizations have a tremendous amount of resources invested in existing monolith applications
- Looking for a sane way to capture the benefits of containers and orchestration without having to complete rewrite
- OpenShift provides the platform for their existing investment with the benefit of a path forward for microservice based apps in the future

# Why migrate to JBoss EAP?

Runtime <sup>[1][2]</sup> (framework)	Boot time server only	Boot time including app deployment	Memory usage without load	Memory usage under load	Measured <sup>[3]</sup> throughput
JBoss EAP (Java EE)	2 - 3 sec	<b>3 sec</b>	40 MB	<b>200 - 400 MB</b>	<b>23K req/sec</b>
JBoss EAP (Spring)	2 - 3 sec	7 sec	40 MB	500 - 700 MB	9K req/sec
JBoss WS/Tomcat (Spring)	<b>0 - 1 sec</b>	8 sec	40 MB	0.5 - 1.5 GB	8K req/sec
Fat JAR (Spring Boot)	N/A	<b>3 sec</b>	<b>30 MB</b>	0.5 - 2.0 GB	11K req/sec

[1] The microservice is a simple REST application.

[2] All runtimes are using their default settings

[3] The performance test was conducted with ApacheBench using 500K request with 50 users and keep-alive enabled.

# Lab: Moving existing apps to the cloud

## Goal for lab

In this lab you will learn:

- How to use lab environment for today
- How to migrate an existing legacy Java EE application (CoolStore) from Weblogic to JBoss EAP using **Red Hat Application Migration Toolkit**
- How to deploy the result to **OpenShift container platform** to create a *Fast Moving Monolith*
- Different alternatives to building and deploying an application

SCENARIO 2    MOVING EXISTING APPS TO THE CLOUD

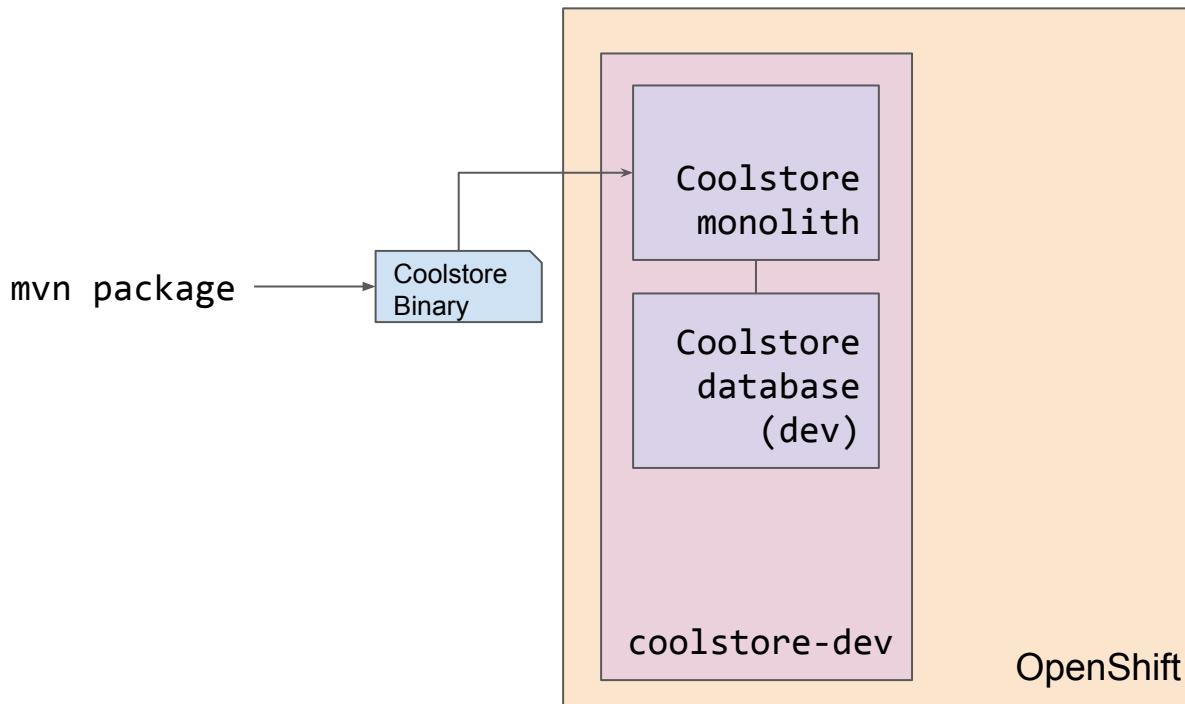

# Wrap-up and discussion

## Result of lab

In this lab you:

- Familiarized yourself with the Lab environment
- Migrated the CoolStore monolith from Weblogic to **JBoss EAP** using **Red Hat Application Migration Toolkit**
- Created a new development project on **OpenShift**
- Deployed the migrated app to OpenShift using a Template and a Binary Build
- In the next lab you will explore OpenShift deeper as a developer
